1. Date

	 Page 1 of pages; RECORDS AND REPORTS, IF ANY, ARE ATTACHED HERETO AND MADE A PART HEREOF
5.	THE INFORMATION DISCLOSED IS GIVEN TO THE BEST OF SELLER'S KNOWLEDGE.
6. 7. 8. 9. 10. 11. 12. 13. 14. 15. 16.	NOTICE: This Disclosure Statement satisfies the disclosure requirements of MN Statutes 513.52 through 513.60. Under Minnesota law, sellers of residential property, with limited exceptions listed on page nine (9), are obligated to disclose to prospective buyers all material facts of which Seller is aware that could adversely and significantly affect an ordinary buyer's use or enjoyment of the property or any intended use of the property of which Seller is aware. MN Statute 513.58 requires Seller to notify buyer in writing as soon as reasonably possible, but in any event before closing, if Seller learns that Seller's disclosure was inaccurate. Seller is obligated to continue to notify Buyer, in writing, of any facts disclosed herein (new or changed) of which Seller is aware that could adversely and significantly affect the Buyer's use or enjoyment of the property or any intended use of the property that occur up to the time of closing. Seller has disclosure alternatives allowed by MN Statutes. See <i>Disclosure Statement: Seller's Disclosure Alternatives</i> form for further information regarding disclosure alternatives. This disclosure is not a warranty or a guarantee of any kind by Seller or licensee(s) representing or assisting any party in the transaction and are not a substitute for any inspections or warranties the party(ies) may wish to obtain.
18.	For purposes of the seller disclosure requirements of MN Statutes 513.52 through 513.60;
19. 20. 21.	"Residential real property" or "residential real estate" means property occupied as, or intended to be occupied as, a single-family residence, including a unit in a common interest community as defined in MN Statute 515B.1-103, clause (10), regardless of whether the unit is in a common interest community not subject to chapter 515B.
22. 23. 24.	The seller disclosure requirements of MN Statutes 513.52 through 513.60 apply to the transfer of any interest in residential real estate, whether by sale, exchange, deed, contract for deed, lease with an option to purchase or any other option.
25. 26. 27. 28.	INSTRUCTIONS TO BUYER: Buyers are encouraged to thoroughly inspect the property personally or have it inspected by a third party, and to inquire about any specific areas of concern. NOTE: If Seller answers NO to any of the questions listed below, it does not necessarily mean that it does not exist on the property. NO may mean that Seller is unaware that it exists on the property.
29. 30. 31. 32.	INSTRUCTIONS TO SELLER: (1) Complete this form yourself. (2) Consult prior disclosure statement(s) and/or inspection report(s) when completing this form. (3) Describe conditions affecting the property to the best of your knowledge. (4) Attach additional pages, with your signature, if additional space is required. (5) Answer all questions. (6) If any items do not apply, write "NA" (not applicable).
33.	Properly located at 12867 Greystone Court N.
34.	City of, County of, State of Minnesota.
35.	A. GENERAL INFORMATION:

242.		Give details to any question answered "Yes":
243.		
244.		
245. 246.	М.	RADON DISCLOSURE: (The following Seller disclosure satisfies MN Statute 144.496.)
247. 248. 249. 250.		RADON WARNING STATEMENT: The Minnesota Department of Health strongly recommends that ALL homebuyers have an indoor radon test performed prior to purchase or taking occupancy, and recommends having the radon levels mitigated if elevated radon concentrations are found. Elevated radon concentrations can easily be reduced by a qualified, certified, or licensed, if applicable, radon mitigator.
251. 252. 253. 254. 255.		Every buyer of any interest in residential real property is notified that the property may present exposure to dangerous levels of indoor radon gas that may place occupants at risk of developing radon-induced lung cancer. Radon, a Class A human carcinogen, is the leading cause of lung cancer in nonsmokers and the second leading cause overall. The seller of any interest in residential real property is required to provide the buyer with any information on radon test results of the dwelling.

Radon_{in} Real Estate Transactions

All Minnesota homes can have dangerous levels of **raden gas** in them. Radon is a colorless, odorless and tasteless **radioactive gas** that can seep into homes from the earth. When inhaled, its radioactive particles can damage the cells that line the lungs. Long-term exposure to radon can lead to **lung cancer**. About 21,000 lung cancer deaths each year in the United States are

It does not mater if the home is old or new and the only way to know how much radon gas has entered the home is to conduct a radon test. MDH estimates 2 in 5 homes built before 2010 and 1 in 5 homes built since 2010 exceed the 4.0 pCi/L action level.

caused by raden, making it a serious health concern for all Minnesotans.

In Minnesota, buyers and sellers in a real estate transaction are free to negotiate radon testing and reduction. Ultimately, it is up to the buyer to decide an acceptable level of radon risk in the home. Prospective buyers should keep in mind that it is inexpensive and easy to measure radon, and radon levels can be lowered at a reasonable cost. The MDH Radon Program website provides more detailed information on radon, including the MDH brochure "Keeping Your Home Safe from Radon."

The Minnesota Radon Awareness Act does not require radon testing or mitigation, However, many relocation companies and landing institutions, as well as home buyers, require a radon test when purchasing a house. The purpose of this publication is to educate and inform potential home buyers of the risks to radon exposure and how to test for and reduce radon as part of real estata transactions.

Disclosure Requirements

Effective Jenuary 1, 2014, the Minnesota Radon Awareness Act requires specific disclosure and education be provided to potential home buyers during residential real estate transactions in Minnesota. This publication is being provided by the seller in order to meet a requirement of the Act. In addition, before signing a purchase agreement to sell or transfer residential real property, the seller shall disclose in writing to the buyer eny knowledge the seller has of radon concentrations in the dwelling.

The disclosure shall include:

- 1. whether a radon test or tests have occurred on the property;
- the most current records and reports pertaining to radon concentrations within the dwelling;
- a description of any radon concentrations, mitigation, or remediation;
- information regarding the radon mitigation system, including system description and documentation, if such system has been installed in the dwelling; and
- 5. a radon warning statement

Radon Warning Statement

"The Minnesote Department of Health strongly recommends that ALL homebuyers have an indoor radon test performed prior to purchase or taking occupancy, and recommends having the radon levels mitigated if elevated radon concentrations are found. Elevated radon concentrations can easily be reduced by a qualified, certified, or licensed, if applicable, radon mitigator.

Every buyer of any interest in residential real property is notified that the property may present exposure to dengerous levels of indoor radon gas that may place the occupants at risk of daveloping radon-Induced lung cancer. Radon, a Class A human carcinogen, is the leading cause of lung cancer in nonsmokers and the second leading cause overall. The seller of any interest in residential real property is required to provide the buyer with any information on radon test results of the dwelling."

Radon Facts

How dangerous is radon?

Radon is the number one cause of lung cancer in non-smokers and the second leading cause of lung cancer overall, next to tobacco smoking. Thenkfully, much of this risk can be prevented through tosting and taking action to reduce high levels of radon gas when and where they are found. Your risk for lung cancer increases with higher levels of radon gas, prolonged exposure and whether or not you are a smoker.

Where is your greatest exposure to radon?

Redon is present everywhere, and there is no known safe level. Your greatest exposure is where it can concentrate indoors and where you spend most of your time. For most Minneactana, this is at home. Whether a home is old or new, well-seeled or drafty, with or without a basement, any home can have high levels of radon.

reaun-comes morn-one someonly found in nearly alsoils in Minnesote, As a gas, redon moves freely through the soil and eventually into the air you breathe. Our homes tend to draw soil gases, including radon, into the structure.

Homes built in Minneaute since June 2009 are required to contain construction features that may limit redon entry. These features are known as passive Radon Resistant New Construction (RRNC). While these passive RRNC features may lower the emount of radon in newer homes, it does not guarantee low levels. It is recommended all new homes be tested for radon, and if elevated levels are found,

I have a new home, aren't radon levels reduced ulready?

all new homes be tested for radon, and if elevated levels are found these passive RRNC features can be easily and inexpensively activated with the addition of a radon fan in the attic. If you are buying a new home, ask if the home has any RRNC features and if the home has been tested.

What is the recommended action based on my results? If the average radon in the home is at or above 4.0 pCi/L, the house should be fixed. Consider fixing the home if radon levels are between 2 pCi/L, and 3.9 pCi/L. While it isn't possible to reduce radon to zero, the best approach is to reduce the radon levels to as low as reasonably achievable. Any amount of radon, even below the recommended action level, carries some risk,

How are radon tests conducted in real estate transactions?

Because of the unique nature of real estate transactions, involving multiple parties and financial interests, there are special protocols for radon testing.

Fastest

Test is completed by a certified contractor with a calibrated CRM for a minimum of 48 hours.

Test report is analyzed to ensure that it is a valid test.

Short-term Testing Second fastest

Two short-term test kite are used at the same time, placed 6-12 inches apert, for a minimum of 48 hours.

Teet kits are sent to the lab for enelysis,

The two test results are averaged to get the radon level. Sequential
Short-Term Testing

Slowest

One short-term test is performed for a minimum of 48 hours.

Test kit is sent to lab for analysis.

Another short-term kit is used in the same place as the first, sterted right after the first test is taken down. Test is performed for a minimum of 48 hours.

Test kit is sent to the lab for analysis.

The two test results are averaged to get the radon level.

Radon Testing

House conditions when testing

Be aware that any test lasting less than three months requires closed-house conditions.

Closed-house conditions: mean keeping all windows and doors closed, except for normal entry and exit.

Before Testing: Begin closed-house conditions at least 12 hours before the start of the radon test.

During Testing: Maintain closed-house conditions during the entire duration of the short term test.

Operate home heating or cooling systems normally during the test.

Where the test should be conducted

Any radon test conducted for a real estate transaction needs to be placed in the lowest livable area of the home sultable for occupancy. In Minnesota, this is typically in the basement, whether it is finished or unfinished.

The test kit should be placed:

- two to six feet above the floor
- at least three feet from exterior walls
- faur inches ewey from other objects
- in a location where it won't be disturbed
- not in enclosed areas
- not in ereas of high heat or humidity

If the house has multiple foundation types, it is recommended that each of these be tested. For instance, if the house has one or more of the following foundation types—basement, crawl space, slab-ongrade—a test should be performed in the basement and in at least one room over the crawlspace and one room with a slab-on-grade area.

Who should conduct radon testing in roal estate transactions?

All radon tests should be conducted in accordance with national radon measurement protocols, by a certified and MDH listed professional. This ensures the test was conducted properly, in the correct location and under appropriate building conditions. A list of these radon measurement professionals can be found at MDH's Hadon web site. A saller may have previously conducted testing in a property. If the test result is at or above the action level the home should be mitigated.

Radon Mitigation

Lowering radon in existing homes – Radon Mitigation

When elevated levels of radon are found, they should be mitigated. Elevated radon concentrations can be easily reduced by a nationally certified and MDH listed radon mitigation professional. A list of these radon mitigation professionals can be found at MDH's Radon web site

Radon mitigation is the process or system used to reduce radon concentrations in the breathing zones of occupied buildings. The goal of a radon mitigation system is to reduce the indoor radon levels to below the EPA action level of 4.0 pCi/L. A quality radon reduction (mitigation) system is often able to reduce the annual average radon level to below 2.0 pCi/L

Active sub-slab suction (also called sub-slab depressurization, or SSD) is the most common and usually the most reliable type of system because it draws radon-filled air from beneath the house and vents it outside. There are standards of practice that need to be followed for the installation of these systems. More information on radon mitigation can be found at the MDH Radon website.

After a radon reduction system is installed

Perform an independent short-term test to ensure that the reduction system is effective. Make sure the radon system is operating during the entire test. Once a confirmatory radon test shows low levels of radon in the home, be sure to retest the house every two years to confirm continued radon reduction.

Contact the MDH Radon Program if you are uncertain about anything regarding radon testing or mitigation.

The MDH Radon Program can provide:

- · Information about radon health effects, radon testing and radon mitigation;
- · Names of trained, certified and MDH listed radon professionals;

DISCLOSURE STATEMENT: WELL

79. Page 3

INSTRUCTIONS FOR COMPLETING THE WELL DISCLOSURE STATEMENT 80. 81. DEFINITION: A "well" means an excavation that is drilled, cored, bored, washed, driven, dug, letted or otherwise constructed if the excavation is intended for the location, diversion, artificial recharge or acquisition of groundwater. 82. MINNESOTA UNIQUE WELL NUMBER: All new wells constructed AFTER January 1, 1975, should have been 83. assigned a Minnesota unique well number by the person constructing the well. If the well was constructed after this date, you should have the unique well number in your property records. If you are unable to locate your unique well 85. number and the well was constructed AFTER January 1, 1975, contact your well contractor. If no unique well number 86. 87. is available, please indicate the depth and year of construction for each well. 88. WELL TYPE: Use one of the following terms to describe the well type, 89. WATER WELL: A water well is any type of well used to extract groundwater for private or public use. Examples 90. of water wells are: domestic wells, drive-point wells, dug wells, remedial wells and municipal wells. 91. IRRIGATION WELL: An irrigation well is a well used to irrigate agricultural lands. These are typically 92. large-diameter wells connected to a large pressure distribution system. 93. MONITORING WELL: A monitoring well is a well used to monitor groundwater contamination. The well is 94. typically used to access groundwater for the extraction of samples. DEWATERING WELL: A dewatering well is a well used to lower groundwater levels to allow for construction 95. 96. or use of underground spaces. 97. INDUSTRIAL/COMMERCIAL WELL: An industrial/commercial well is a nonpotable well used to extract 98. groundwater for any nonpotable use, including groundwater thermal exchange wells (heat pumps and heat 99. loops). 100. WELL USE STATUS: Indicate the use status of each well. CHECK ONLY ONE (1) BOX PER WELL. IN USE: A well is "in use" if the well is operated on a daily, regular or seasonal basis. A well in use includes 101. 102. a well that operates for the purpose of irrigation, fire protection or emergency pumping. 103. NOT IN USE: A well is "not in use" if the well does not meet the definition of "in use" above and has not been sealed by a licensed well contractor. 104. 105, SEALED: A well is "sealed" if a licensed contractor has completely filled a well by pumping grout material throughout the entire bore hole after removal of any obstructions from the well. A well is "capped" if it has 106. 107. a metal or plastic cap or cover which is threaded, bolted or welded into the top of the well to prevent entry 108. into the well. A "capped" well is not a "sealed" well. 109. If the well has been sealed by someone other than a licensed well contractor or a licensed well sealing 110. contractor, check the well status as "not in use." 111. If you have any questions, please contact the Minnesota Department of Health, Well Management Section. at (651) 201-4587 (metropolitan Minneapolis-St. Paul) or 1-800-383-9808 (greater Minnesota). 112.
